

AMAN PATEL

Full-Stack Developer | Backend Engineer | AI Builder

📞 +91-9956290357 ✉ ap3668@srmist.edu.in [LinkedIn](#) [GitHub](#) [Portfolio](#) 📍 Delhi NCR (Open to WFH)

CAREER OBJECTIVE

3rd-year B.Tech Computer Science student (6th Semester, graduating 2027) seeking a software development internship to apply hands-on expertise in backend systems, full-stack web development, and applied AI. Two production projects live on the web. Proven ability to ship end-to-end products using Java Spring Boot, the MERN stack, and Python — eager to contribute to scalable, real-world products.

EDUCATION

B.Tech – Computer Science & Engineering | SRM Institute of Science & Technology May 2023 – June 2027

- ▶ Current Semester: 6th Semester (3rd Year) | CGPA: **8.44 / 10.0**
- ▶ Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP, Software Engineering, Cloud Computing

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript (ES6+), Python, C++, SQL, HTML5, CSS3

Backend: Spring Boot, Spring Security, JPA/Hibernate, Node.js, Express.js, REST APIs, JWT Auth

Frontend: React.js, Next.js (App Router), Tailwind CSS, Framer Motion, Responsive Design

Databases: PostgreSQL, MongoDB, MySQL, Redis, Firebase, SQL & NoSQL design

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Vercel, GitHub Actions, CI/CD, Linux

AI / ML: TensorFlow.js, MediaPipe, OpenAI API, Google Gemini API, prompt engineering, LLM integration

Tools & Practices: Git, GitHub, Postman, Swagger/OpenAPI, Maven, VS Code, Agile/Scrum, OOP, Design Patterns

DSA: Arrays, Linked Lists, Trees, Graphs, Dynamic Programming, Sorting & Searching

PROJECTS

ResuMatch – Full-Stack ATS-Style Resume Analyzer · Java 21 · Spring Boot 3.4 · PostgreSQL · Next.js 15 · JWT Apr 2026

- ▶ [Live Demo](#) | [Backend Repo](#) | [Frontend Repo](#)
- ▶ Designed and shipped a full-stack production app that scores resumes against job descriptions on a 0–100 scale, surfacing matched and missing keywords for transparent ATS-style analysis
- ▶ Built a Spring Boot 3.4 REST API with 16 endpoints across 4 controllers, secured by stateless JWT auth (BCrypt hashing) and multi-tenant data isolation via owner-scoped queries
- ▶ Implemented PDF text extraction with Apache PDFBox and a hybrid scoring algorithm combining a curated 179-skill dictionary with Jaccard similarity over JD tokens (weights: 50% keyword + 30% skills + 20% text)
- ▶ Built the Next.js 15 dashboard with TypeScript, Tailwind, and Framer Motion — drag-and-drop PDF upload, animated radial score gauge, and a client-side demo mode that mirrors the Java backend in TypeScript
- ▶ PostgreSQL with Hibernate JPA (5 entities), JOIN FETCH queries to eliminate N+1 issues; deployed UI on Vercel with auto-redeploy from GitHub

AskAman – AI-Powered Portfolio with Streaming Chat · Next.js 15 · TypeScript · Tailwind · Google Gemini API Mar 2026

- ▶ [Live Demo](#) | [GitHub](#)
- ▶ Built a portfolio site with a floating AI chat widget answering questions about my background using the Gemini 2.5 Flash Lite API, with token streaming via the Web Streams API for sub-second first-token latency
- ▶ Engineered a layered system prompt with persona, structured knowledge base, and guardrails against prompt-injection and off-topic jailbreaks; added a model-fallback chain so quota-limited requests auto-retry on a backup model
- ▶ In-memory IP rate limiter (15 req/min/IP), conversation history normalization for Gemini's first-message constraint, and full Vercel deployment with env-managed API keys

SignSpeak – Real-Time ASL Translator (Browser-Native ML) · Next.js 15 · TypeScript · MediaPipe · TensorFlow.js May 2026

- ▶ Built a browser-native machine-learning instrument that detects American Sign Language hand signs from a live webcam feed and transcribes them into text, with zero backend and zero outgoing network calls — fully privacy-preserving
- ▶ Integrated Google MediaPipe Tasks Vision for real-time hand-landmark detection (21 keypoints per hand at ~60fps) and rendered an animated skeleton overlay on a mirrored canvas via the HTML5 Canvas API

- ▶ Designed a custom data-collection pipeline storing wrist-normalized landmark vectors (63-dim) in localStorage, and trained a dense TensorFlow.js classifier in-browser on the 26-letter ASL alphabet
- ▶ Engineered an end-to-end client-side ML workflow — capture → normalize → train → predict — with confidence-thresholded sentence assembly and a clinical-research-themed UI built in Next.js 15 + Tailwind + Framer Motion

ACHIEVEMENTS & ACTIVITIES

- ▶ Participated in **National AI/ML Hackathon (YUVAAN × Vivriti Capital), IIT Hyderabad** — Team "Timepass Coders"; prototyped an AI-powered open-innovation crowdsourcing platform
- ▶ Participated in **DTU InnoVault IIC Hackathon 2026** — built a citizen-powered local problem reporting and tracking platform
- ▶ Participated in **Enginow Hackathon 2026** — advanced to Round 2 with an original project submission
- ▶ Participated in **Elite Coders Winter of Code (ECWoC)** — active contributor to coding assessments and open collaboration

CERTIFICATIONS

- ▶ Data Structures & Algorithms in Java – Udemy, 2026
